

C1
35. (Amended) The liquid crystal display according to claim 34, each color filter located at a central portion of the dot.

C2
37. (Twice Amended) A liquid crystal display comprising:
a first electrode;
a second electrode opposing the first electrode;
a plurality of dot areas arranged in a matrix form at an overlapping portion of the first electrode and second electrode, for display, wherein each of the dot areas includes a first section and a second section;

a reflector arranged outside the first electrode and the second electrode;
a color filter arranged in the first section; and
a layer arranged in the second section, and being substantially transparent.

C3
39. (Amended) A liquid crystal display, comprising:
a first electrode;
a second electrode opposing the first electrode;
a plurality of dots formed at overlapping portions of the first electrode and second electrode;

a reflector arrangement outside the first electrode and the second electrode;
and

a plurality of color filters, a color filter being arranged to correspond to each of the plurality of dots, wherein individual dots includes an area having a color filter and an area having no color filter, each color filter being separated from adjacent color filters by an area having no color filter, and a substantially transparent layer being arranged to correspond to the area having no color filter.

C4

56. (Twice Amended) A liquid crystal device comprising:
a first electrode;
a second electrode opposing the first electrode;
a plurality of dot areas arranged in a matrix form at an overlapping portion of
the first electrode and second electrode, for display, wherein each of the dot areas includes a
sub
H2
first section and a second section;
a reflector arranged outside of the first electrode and the second electrode and
a color filter selectively arranged in the first section.

end
H3

61. (Amended) A liquid crystal device comprising:

G5

a first electrode;
a second electrode opposing the first electrode;
a plurality of dot areas arranged in a matrix form at an overlapping portion of
the first electrode and second electrode, wherein each of the dot areas includes a first section
and a second section;
a reflector arranged outside the first electrode and the second electrode; and
a color filter arranged in the first section, wherein the size of the color filter is
smaller than that of the dot area.

62. (Amended) A liquid crystal device comprising:

a first electrode;
a second electrode opposing the first electrode;
a plurality of dot areas arranged in a matrix form at an overlapping portion of
the first electrode and second electrode, each of the dot areas including a first section and a
second section;
a reflector arranged outside of the first electrode and the second electrode; and
a color filter arranged in the first section;
